

ON LINE UPDATE

**MUL-T-LOCK®**

NO. 207

DATE: 30.10.2007

## More resistance!

Following the pins update we have implemented and notified you in our on line # 179 (increasing the number of mushroom body pins, and new sharper angles on the plug mushroom pins) our continuous research of the issue enabled us to come up with a simple yet very effective answer to this challenge!

The new pin is a "split D" plug pin!

While in regular use – both parts function as one regular D pin – when a "Bumpkey" attempt is carried out, the two parts will spread away from each other (instead of the body pin & plug pin...) this way keeping the shear line secured at all times!

First we implemented this solution in products made for Construct and now we will implement it in all other telescopic pin tumbler products!

At least one of the D pins in every cylinder will be of this new kind!
