Thumbturn update

In the good spirit of saving highly valuable raw material – we have modified our thumb turn plugs, and the euro cylinders spacers...this is a very visual change – but without any effect on function and not even logistics, as all part will continue to be fully compatible.

We do want to take this opportunity and remind all that the center stopping pin "2" comes in one length for all with the exception of the different between the key side being of the 33 or 35 mm basis – for the 35 mm a thicker head one should be used.

Attached is a PDF document that has all the information relevant to all types of plug spacers with their p/n. We are sure you will find it useful.
