Break Secure cylinder

The European cylinder seems to have been a target for attacks from the day it was first invented. Most attackers take advantage of the one weak point located around the M5 threaded hole at the center of the body – exactly where the opening for the cam/gear happens to be...

We at Mul-T-Lock believe the best way to secure a cylinder against breaking attacks is a decent cylinder protector – and we have quite few good ones to offer.

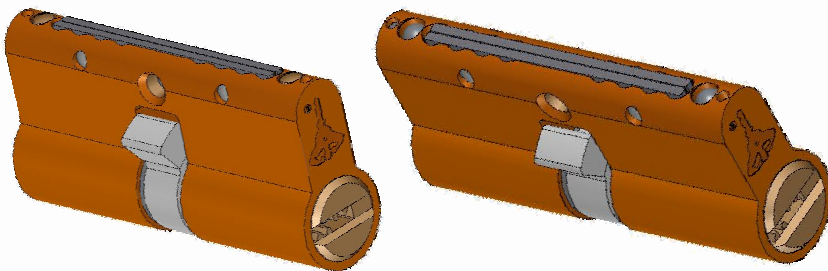

Euro profile worst “enemy”

Euro profile best friend

But market forces pull in many different directions, and a few years ago, like many other manufacturers, we started to offer our customers cylinders with a “reinforcing bar” at the bottom – the same as in the modular cylinder. This, no doubt, added to the cylinder’s breaking resistance – since more force is needed to break it.

Shortly afterwards we were introduced through another Group company to the 3-part cam, and implemented it immediately...

But innovative thinking strikes again – and we came out with our first “Break Secure” cylinder... This one has “breaking lines” similar to those of a simple... chocolate bar... At first we limited it to the 7X7 line, assuming that it is intended for those customers who do not need or want to use a cylinder protector.

Now, overwhelmed with the success (and seeing the competition once again in our tracks), we are adding the Break Secure to the telescopic pin tumbler lines as well - Classic and Interactive.

Technically, the idea of the Break Secure is that when the cylinder is held by a breaking tool, it breaks right away – but not in the middle...leaving the burglar with a piece much harder to grab on to.

In the next page you can see some literature reflecting the very successful experience of two of our selling units, MUL-T-LOCK Turkey and MUL-T-LOCK UK.

BREAK SECURE

MUL-T-LOCK HAS DEVELOPED THE BREAK SECURE CYLINDER, WHICH HAS BEEN SPECIFICALLY DESIGNED TO WITHSTAND ATTACK FROM BURGLARS. ODIAN MCKILSTER, MANAGING DIRECTOR OF MUL-T-LOCK, EXPLAINS:

"Locksmiths and police forces throughout the country have increasingly been reporting burglaries where Euro Profile cylinders have been targeted. While we don't want to panic homeowners, this is a problem which we have taken very seriously and feel that everyone should be aware of."

The Break Secure cylinder can be fitted to PVCU windows and doors where Euro Profile cylinders are commonly used, and is designed to carry on working even if the cylinder is damaged by attack. The new Break Secure cylinder is designed to be a direct replacement for an existing cylinder, with no other works required to the door or lock. The Break Secure cylinder can be used either with other cylinders or padlocks from the Mul-T-Lock range.
