Crescent drill protection in loaded bodies

In online update No. 215 (November 2008) we informed you that the new crescent drill protection is available in all Mul-T-Lock Euro profile cylinders.

Now we are pleased to add that this crescent drill protection will be placed and supplied in loaded cylinder bodies as well.

This improvement will eliminate the need to order the crescent drill protection separately for loaded cylinder bodies.

The hardened crescent technique improves the drill resistance of all cylinders, compared with other methods.

Please make sure that the crescent is in place when reassembling the cylinder after re-keying or any other procedure.

We will continue to look for a way to fix the crescent drill protection in place, so that it does not fall out during assembly.
