Key measuring device

Precision is always important when cutting keys for all Mul-T-Lock cylinders...and to help you achieve this goal we always offered a “key measuring device”...

With the new MT5+ platform the challenge become even more challenging as their is some additional dimension on that key – the finger pins cuts...and when attempting to adjust the new KC5 machine more information is needed.

We are proud to introduce a new KMD, this new device will measure depth in the “old fashion way” but will also enable measuring the “snake” groove.

In this new KMD, key can be placed on its side, and a special "Elbow probe" will fit into the milled groove to give you a reading of the finger pin combination – over the key “Y” axis.

This new KMD is also suitable for measuring all of our other platforms key cuts.

The KMD (with user manual) is available for orders under P/ N 90602550.

For detailed operating instructions please refer to the manual in next pages.
