INTERACTIVE *is almost here!*

Long waited for **INTERACTIVE**  is just around the corner.

The new product is backward compatible – mainly meaning that new patented keys (pending at present) will work with older cylinders – but old keys will not work with new cylinders.

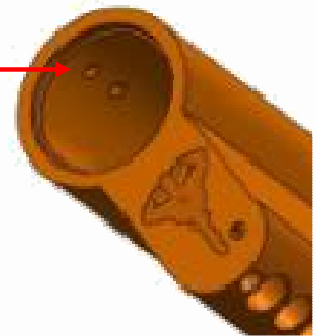

The same situation occurs with cylinder bodies (new will work with "old" but old will not work with new).

To help us all get ready for this we are starting to "push" cylinders bodies – as this is a long part of the pipeline.

FIFO model (First In First Out) is now more important than ever before!

To help you identify new bodies:

- Cylinder body has two partial drillings at the top  and can be used with old and/or new plugs (also classic)
- Additional identification will be a "+" (instead of "I") mark appearing next to the date of production marking (i.e. 3511+)

At this time we want to encourage you to move out as much old stock as you can... while keeping FIFO in mind, so when next step is coming you will be ready.
