7X7 and Integrator key system with ADP

We are all familiar with our effective resistance methods against drilling attempts being implemented on our cylinders.

We have decided to use our standard anti-drilling pin, TO REPLACE the anti-drilling plate (moon shape) across our 7X7 and Integrator ranges, as part of a manufacturing and logistical standardisation process to support continual improvement.

This change will continue to provide the required resistance level for most familiar standards, such as EN1303 in the highest level.

This change will be affected immediately, although, we will have a period during which both versions will be supplied from our production sites.
