## Swiss profile cylinder – New body design

In our constant product evaluation and improvement process we are now producing Mul-T-Lock "Swiss profile cylinders" with new body design which is using the standard Swiss profile raw material body.

This action will simplify and shorten the supplying process in the HQ.

This step required design adjustments but with no effect on cylinder functionality.

The cylinder looks a bit different because of the "partition line" between the sleeve and the body (did not exist in the previous products).

All assembled cylinders will remain with the same p/n.
