

MUL-T-LOCK®

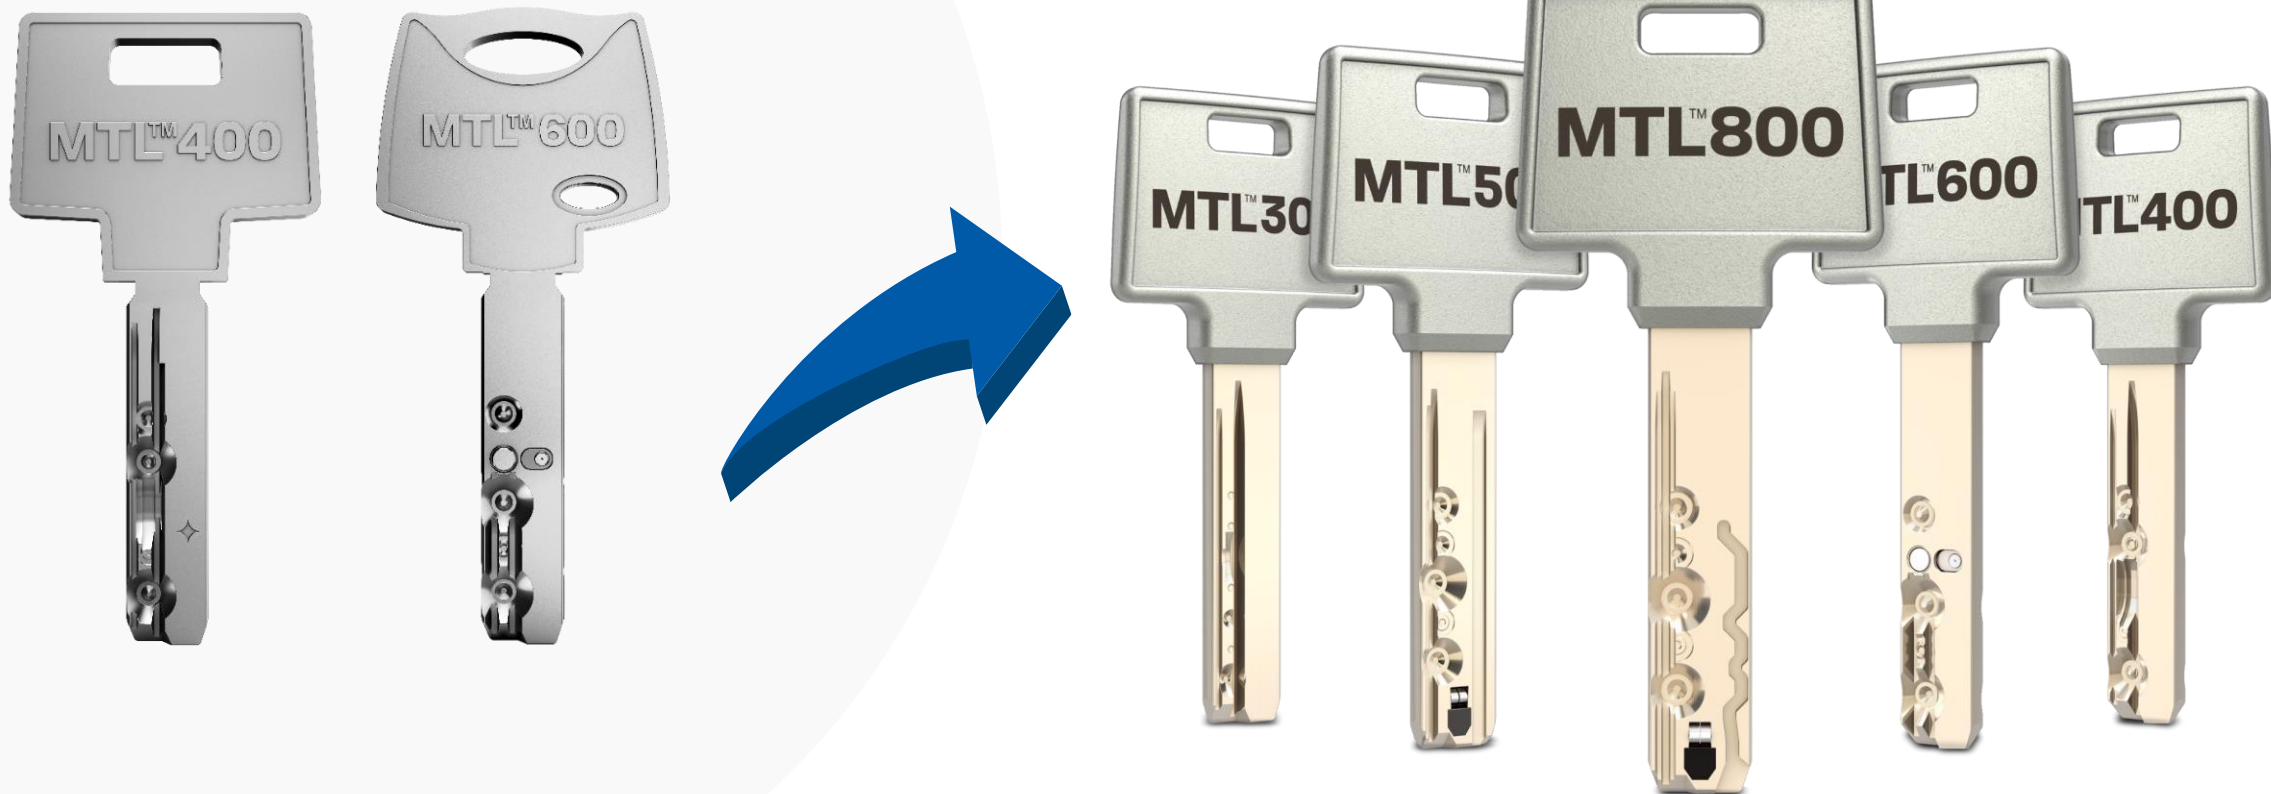

New Metal Key

Product update no: 323

Date: 11.04.2024

New key will replace the current configuration

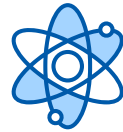

New Metal Key

Main features

Available in all patented platforms

Made of two components:

- Metal key head
- Mul-T-Lock standard key blade

Design

- Side 1: "Mul-T-Lock" logo + "PATENTED"
- Side 2: Platform name **Or** Customer details/logo/etc. (laser mark)

New Metal Key Main Advantages

Increased Graphic Capabilities

Customize your key with laser marking (any logo, phone number, etc.)

Lower MOQ

Since there is no investment in stamping tools

Reduced Lead Time

- ❑ Manufactured using standard machinery
- ❑ Eliminating the need for investing in stamping tools.

More Durable

Increased resistance to twisting when compared to plastic heads or existing metal keys

New Metal Key Process

Moving forward, all keys will feature laser marking instead of stamping. This allows customers the flexibility to update their logo by sending us an updated file.

The process of ordering new key:

1

Customer orders boxes of blanks meeting the minimum quantity requirement*

*MOQ for customer logo is 5 boxes
MOQ for platform logo is 2 boxes

2

Customer submits a DXF file. If a DXF file is unavailable, please provide a vector/high-resolution logo in any other format

3

Logo is adjusted to fit the new key head, and forwarded for customer approval

4

New drawing is created, a new P/N is opened, and customer records are updated

Promotion

To ensure our partners are well-informed and prepared for the transition, and to introduce the metal key to markets that typically purchase key blanks with plastic heads, we have temporarily updated the artwork on the key blanks package to promote the new metal key.

As of now, one package will fit all metal & plastic blanks (PN 8000907)

* The artwork will change back to standard blue box after the first few months of the launch
