Improvements to the Drawer Bolt Lock

With this product gaining bigger sale volume every day...we have introduced a major change to some of the product components.

This change was done to increase product function reliability – and in the same time we enjoy a logistic benefit that comes by reducing the number of parts involved.

The plug was changed, and with it the bolt actuator – this change eliminates the use of the plug disc, no change to other parts!

Due to this change – plugs are not interchangeable (between old & new) as can very clearly be seen in the drawing.
