Hi-Lock™: Security door lock

We are happy to present the Hi-Lock™ - a new mortise lock, which was developed as an auxiliary security lock for entrance doors.

Originally, the Hi-Lock™ was designed for the Israeli market, but generally it can be used in any door as an auxiliary security lock (and even as a main lock).

The product has pending patent in Israel.

In doors which are equipped with our 265 multi-point lock, the Hi-Lock™ can prevent the operation of the 265 lock, by blocking the movement of the upper bolt, using a special stopper element, thus increasing the door's safety above and beyond with just the main lock.

The Hi-Lock™ is operated by a Euro profile cylinder, providing the following advantages:

- Can be keyed alike to the primary lock cylinder – or keyed different – for “dual control” where needed.
- MKS capabilities
- Other Mul-T-Lock keying options

Together with this document, is a presentation which provides more details about the product. Also check the link below:
