New ArmaDlock's version

In order to bring the ArmaDlock to an even higher level, we are happy to present its new version.

Our existing ArmaDlock is made of Aluminum and produced by casting technology with black painting.

Starting from January 2021, we will supply the ArmaDlock's new version - made from machined Aluminum bar, followed by special surface treatment + high quality black anodizing.

This new version will demonstrate the following improvements:

- Much better environmental resistance (corrosion/oxidation).
- Better physical resistance.
- Much better and unified appearance.
- Much more accurate dimensions.

We will open new p/n's for the new version, as required.
